Born on March 1st, 1998
Nationality: Vietnamese

About me

I am a Ph.D. student in applied machine learning. My expertise in this field motivates me to solve practical and innovative challenges such as anomaly detection and computer vision.

Education

2024: Ph.D. student at Roberval Laboratory, University of Technology of Compiègne, France
2021: Engineer Degree in Electrical and Electronics, University of Science and Technology - Da Nang, Vietnam

Professional Experience

2021 / 2024	<p>Ph.D. student at Roberval Laboratory, University of Technology of Compiègne, Sorbonne Alliance University, France</p> <ul style="list-style-type: none">My research focuses on applying machine learning to develop anomaly detection models in Industry 4.0.<ul style="list-style-type: none">✓ Identify an engine malfunction through vibration and temperature sensors.✓ Identify a defective product through images.✓ Identify an issue in the internal combustion engine control system.
2021	<p>Electrical Engineer at VATEC Energy Engineering Consulting Co. Ltd.</p> <ul style="list-style-type: none">Assessed wind resources for the central region of Vietnam.
2020	<p>Technician Internship at National Power Control Center, Da Nang, Vietnam</p> <ul style="list-style-type: none">Optimized electricity production to meet the demand in the central region.
2019	<p>Technician Internship at Da-Nhim Hydroelectric Power Plant (240 MW), Vietnam</p> <ul style="list-style-type: none">Monitored electrical generator operations.
2018	<p>Laborer Internship at Electrical Laboratory, University of Science and Technology - Da Nang, Vietnam</p> <ul style="list-style-type: none">Assembled, configured, and maintained electrical equipment.

Skills

Programming:

- Pascal, C, C++, Python, Matlab, OOP, Shell

Information Systems:

- Database: SQL, MySQL administration and optimization
- Artificial Intelligence: Deep Learning, Machine Learning, Clustering, Classification

Power Systems:

- Simulation of electrical systems: Matlab, Python, ETAP, PowerFactory - DIgSILENT
- Economic and technical system optimization: Python, Matlab
- Power System Analysis (Python)

Others:

- Project Management, Quality Management

Projects and Competences

- Identify a defective product through images.
- Identify anomalies in the electric motor based on sensor-collected data (Unsupervised learning for multivariate time series).
- Identify unqualified fuel tanks through thermal imaging (Anomaly detection and localization for images).

- Simulation and optimization of electricity generation capacity in a 500 kV power system in Vietnam (PyPSA: Python for Power system analysis).

List of Publications

Languages

- Vietnamese: Native
- English: B2
- French: A2

Interests

- Participation in high school football competitions (second division) and university football team members.
- Participating in running competitions in Paris.
